

Course Syllabus

VE280 Programming and Elementary Data Structures

Summer 2017

Course Description:

This course is an introduction to programming and provides a foundation for data structures. The emphasis of this course will be techniques and principles to quickly write correct programs. This course is not simply a course about programming. Rather, it focuses on concepts and methods underpinning the C++ language. Specific topics of this course include: basics of Linux, procedure abstraction, abstract data type, inheritance, dynamic memory management, template, polymorphism, linked list, stack, and queue.

Instructor:

Weikang Qian

Email: qianwk@sjtu.edu.cn

Phone: 34204020

Office: Room 421, JI Building

Office hour: Tuesday 1:00 pm – 2:00 pm and Thursday 1:00 pm – 2:00 pm, or by appointment

Teaching Assistants:

1. Hao, Yifan

Email: pia1995@sjtu.edu.cn

Cell phone: 15026606710

2. Tao, Xuyang

Email: tao_xuyang@163.com

Cell phone: 13122212391

3. Xu, Kejia

Email: kejiaxu@umich.edu

Cell phone: 15900908722

4. Yao, Yue

Email: patrickyao@sjtu.edu.cn

Cell phone: 15216699420

5. Zhou, Hongkuan
Email: tedzhouhk@163.com
Cell phone: 15021382379

Textbook (Recommended but not required):

1. *C++ Primer, 4th Edition*, by Stanley Lippman, Josee Lajoie, and Barbara Moo, Addison Wesley Publishing, 2005.
2. *Absolute C++, 4th Edition*, by Walter Savitch, Addison Wesley Publishing, 2009.
3. *Problem Solving with C++, 8th Edition*, by Walter Savitch, Addison Wesley Publishing, 2011.

Class Webpage:

Log into Canvas at <http://umji.sjtu.edu.cn/canvas>. Announcements, lecture slides, assignments, and grades will be posted on the class webpage.

Course Prerequisites:

Prior programming experience using C, C++, Java, etc. (preferably in VG101).

Grading Policy:

There will be several quizzes, at least five programming projects, one midterm exam, and one final exam. The grading distribution is:

Quizzes	5%
Projects	50%
Midterm Exam	20%
Final Exam	25%

Any questions about the grading of the projects or exams must be brought to the attention of your TAs or the instructor **within one week** after the item is returned.

Programming Assignments

1. Programming Environment

We require you to develop your programs on Linux operating systems using compiler g++. We will grade your programs in the Linux environment: they must compile and run correctly on this operating system.

2. Assignment Grading

Each project will be evaluated along three dimensions: behavioral correctness, adherence to course principles, and general coding style.

A program is “correct” if it behaves as specified in the project handout. Project descriptions in VE280 should clearly spell out all required behaviors, though sometimes we do make mistakes. If you believe something in the specification is inconsistent or not sufficiently detailed, please let us know.

For any given specification, there are many possible programs that behave correctly. Some of those programs will make use of the principles we discuss in this course, while others will not. To receive full credit, you must write your programs in accordance with these principles.

It is our belief that programs are meant to be read by other programmers, not just executed. Projects that are generally unreadable will not receive full credit. You should choose a good programming style and follow this style consistently throughout your code.

Finally, an important skill the projects teach is how to show that your code exhibits exactly the behaviors required by the project specification. So, while we will usually give you a few simple test cases and their results to try out, we will not give you all of the test cases we plan to use to evaluate correctness. Instead, you are required to come up with as many test cases as you can.

3. Due Date

Each programming assignment will be given a due date. Your work must be turned in by 11:59 pm on the due date to be accepted for full credit.

However, we still allow you to submit your homework within 3 days after the due date, but there is a late penalty. The late penalty is listed in the following table. For example, if you submit your work late by 23 hours and 40 minutes, your grade will be scaled by 80%. If you submit your work late by 24 hours and 10 minutes, your grade will be scaled by 60%. No work will be accepted if it is more than 3 days late—you will receive a zero.

h Hours Late	Scaling Factor
$0 < h \leq 24$ hours	80 %
$24 < h \leq 48$ hours	60 %
$48 < h \leq 72$ hours	40 %

In very occasional cases, we accept deadline extension request. Deadline extension requests will only be considered if you contact the course instructor (not TAs!) in person. Such requests will normally only be considered if they are made before the assignment is due, and will only be granted for documented medical or personal emergencies that could not have been anticipated. If you cannot see the instructor in advance due to the emergency, then see him as soon as you possibly can. In all cases, you will be required to substantiate any extension request with written proof of the emergency. Extensions are not granted for reasons such as accidental erasure/loss of files and outside conflicting commitments. In order to prevent accidental erasure/loss, make sure that you make copies of your code frequently.

Exam

The exams will be closed book ones. No electronic devices are allowed in the exams.

You are expected to take both exams at the scheduled times. If you miss an exam, and a medical or personal emergency is not involved, you will receive a zero for that exam. If you anticipate an exam in another course, you must notify the instructor at least one week before the exam date.

Academic Integrity:

1. All students are expected to attend all of the classes.
2. All programming assignments must be done by yourself. You may discuss the project in oral with other students. However, you may not read/copy others' solution. In all cases in which we have reason to believe that cheating has occurred, we will submit relevant materials to the Honor Council for evaluation.
3. Exams will be given under the JI's Honor Code and will require individual efforts.

Teaching Schedule (Subject to Change)

Lecture	Date	Teaching Activities (Topics and Exams)
1	05/16	Introduction; Linux;
2	05/18	Linux;
3	05/19	Linux; Developing and Compiling Programs on Linux;
4	05/23	Developing and Compiling Programs on Linux; Review of C++ Basics;
5	05/25	Review of C++ Basics; Procedural Abstractions;
6	05/31	Recursion; Function Pointers; (Make-up for the lecture on 06/01)
7	06/02	Function Call Mechanism; Enum Types; Program Arguments;
8	06/06	I/O Streams; Testing;
9	06/08	Testing; Exceptions;
10	06/09	Exceptions; Abstract Data Types (ADT); (Make-up for the lecture on 06/20)
11	06/13	Abstract Data Types (ADT);
12	06/15	ADT Efficiency;
13	06/16	Subtypes and Inheritance;
14	06/22	Midterm Exam Review;
15	06/27	Midterm Exam
16	06/29	Virtual Function and Interface;
17	06/30	Invariant; Dynamic Memory Allocation;
18	07/04	Destructor; Deep Copy;
19	07/06	Dynamic Resizing; Linked Lists;
20	07/11	Linked Lists;
21	07/13	Templates; Container of Pointers;
22	07/14	Polymorphic Containers;
23	07/18	Operator Overloading; Stacks;
24	07/20	Queues; More on Maintenance Methods;
25	07/25	Functors;
26	07/27	Standard Template Library (STL);
27	07/28	Bash scripting
28	08/01	Bash scripting
29	08/03	Final Review;
	08/08	Final Exam;
